

Aarav Mehta

Backend Developer · B.Tech Information Technology, 2027

Final-year IT student who builds backend services that keep working under load: a job queue that stopped a fest app from losing emails, and a canteen ordering API used daily in the hostel.

PROJECTS

QueueKit — Lightweight Job Queue | [GitHub](#) · Jan 2026 – Apr 2026

Stack: Go, PostgreSQL, Docker, GitHub Actions

- Built a Postgres-backed job queue for a college fest app that lost registration emails whenever its mail provider timed out during peak signups.
- Used SKIP LOCKED row claiming so four workers process jobs without double delivery, sustaining 300 jobs per second in a local load test.
- Added exponential retry with a dead-letter table, cutting lost emails in the 2026 fest registration week from about 40 to zero.

CampusBites — Canteen Pre-order API | [GitHub](#) · Aug 2025 – Nov 2025

Stack: Node.js, Express, MongoDB, Redis

- Replaced the paper token system at the hostel canteen with a pre-order API, so students stop queueing through the lunch rush.
- Cached the daily menu in Redis and served 1,200 orders in the first month with p95 response times under 120 ms.
- Wrote 35 integration tests covering ordering, cancellation and stock limits, running on every push through GitHub Actions.

TECHNICAL SKILLS

Languages: Go, JavaScript, Python, SQL

Backend: Node.js, Express, REST APIs, Redis

Databases: PostgreSQL, MongoDB

Tools: Docker, Git, GitHub Actions, Linux

EDUCATION

Deccan Institute of Technology

B.Tech, Information Technology

Pune, Maharashtra · Aug 2023 – May 2027

CGPA: 8.1 / 10

AWARDS & CERTIFICATIONS

- Finalist, inter-college hackathon of 120 teams — 2025

OTHER ROLES & RESPONSIBILITIES

- Web Team Lead, Coding Club (Aug 2024 – May 2025)**
— ran weekly backend workshops for 40 juniors.
